We are honored to be featured in the South Coast Chamber of Commerce's upcoming magazine as their featured technology article this winter!

The Chamber hosted an on-site photo-shoot to capture our employees, technology, and machines hard at work.

COMMUNITY UPDATE

A YEAR IN REVIEW 2022

We have officially moved into our **second facility** in Camarillo, California known as our **Customer Support Center**.

Our on-site testing and metrology lab offers complimentary profile evaluation and low run production runs for our customers. We will keep you updated as we renovate and add capabilities to this new facility.

We will begin customer tours and demonstrations at the beginning of 2023.

We are excited to have joined the **Santa Barbara South Coast Chamber of Commerce** as well as the **Chamber's Technology and Manufacturing Committee**.

Fostering relationships within our own community, discussing local manufacturing, as well as networking has been an integral part to expanding Sikama on a number of levels.

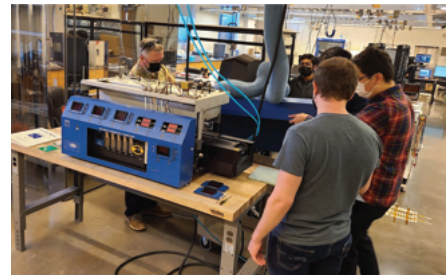

Herb and Jeff spent a week discussing our **Fluxless EA UP1200 Oven's** benefits, capabilities, and industry changing technology in San Francisco, California during Semicon West 2022. We also discussed our 40th anniversary, product line-up, and the unique applications Sikama International can accommodate.

We enjoyed seeing old friends, meeting new, and working alongside Alex and Jeff Berlin from TEC Associates.

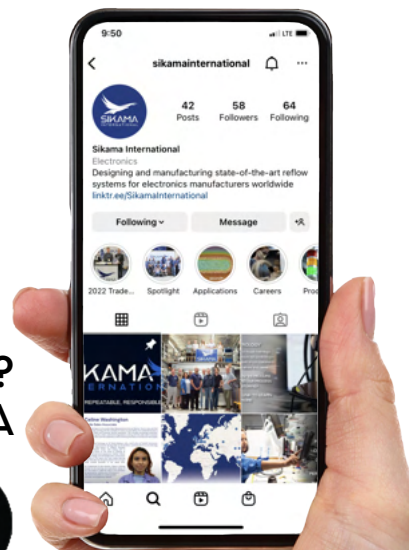

We spent a week with **AirProducts™** collaborating and discussing our Electron Attachment Ultra Profile 1200. We enjoyed discussing the technology as well as looking into ways to further develop and advance our products.

We are pleased to have started a partnership with **UCLA, The University of California Los Angeles**. Patrick, Jeff, and Herb are excited at the opportunity for students and faculty alike to utilize and learn from our products.

Jeff and Victoria took part in **IMAPS' 18th International Conference & Exhibition on Device Packaging** discussing our Fluxless EA UP1200 Oven as the next generation of safe, fluxless reflow solder solutions.
